

Introducing Our Easy Strip Cables

50% Less Installation and Efforts

The Power of Easy Strip Technology

When you must connect numerous ends of cable, you want to be able to work quickly and efficiently. However, some cables can be difficult to strip. For example, sheathing can stick to the conductors, allowing you to dismantle only short lengths.

There are also times when you have to remove the filler jacket piece by piece between the conductors. Safety is essential.

That is why you need to be careful while dismantling a cable. If you cut too deep, you risk damaging the insulation, which is unsafe.

Key Benefits

The big advantage of Easy Strip technology is that you only have to cut once, so you no longer have to cut lengthwise. This saves you a lot of time and limits your risks.

Quick and easy strippable insulation

Ensures precision and installation safety

Saves time & money (more precision coming in)

Saves effort & preserves user health

How Does It Work?

1. Cut into the sheath all over at the desired length, and that can be 60 cm or even 100 cm!
2. Give a small kink on the cut to break the inner jacket
3. Remove the sheath over the entire length in just a jiffy!
4. Ready to connect!

Multicore Flexible Cables:

FNYMHY

FNYLHY

Easy Strip is available on coils and on Mobiway

Where to find our Easy Strip cables

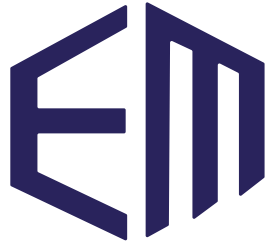

- Easy Strip is available near you through our network of trusted local authorized distributors.
- For product availability, pricing, and more details, reach out to Liban Cables distributors directly.
